SUMMARY

Full stack developer with 2+ years of experience, including two years on a SaaS payroll and workforce management platform. I work mostly in JavaScript and PHP, along with HTML/CSS, TypeScript and MySQL. I've built REST API integrations, sped up slow database queries, written unit tests, reviewed code and fixed bugs in production. Right now I'm building my own AI product, SignalSEO, and contracting at NFE, where I use Claude Code on a live platform. I use Claude and GitHub Copilot every day and check what they produce before it ships.

WORK EXPERIENCE

Software Tester & AI-Assisted Developer (Contract) — Natural Facial Enhancement Ltd (NFE) Oct 2026 – Present

- Tested a live training and certification platform: ran 60 user acceptance test cases, logged issues with screenshots and recordings, and reported to the owner daily.
- Used Claude Code to fix bugs found in testing and to ship approved UI changes for participants, tutors and admins, reviewing and testing each change before it was merged.
- Set up a shared design system so status labels, icons and tables look the same for every role, documented in DESIGN.md, with an admin page that shows every component.
- Built changes in my IDE with Claude Code, pushed them to the live platform on Replit, and used AI agents with Playwright to click through and test the site automatically.

Founder & Developer — SignalSEO (AI Competitor Intelligence SaaS) Mar 2026 – Present

- Built and registered SignalSEO on my own. It researches the competitors of local service businesses and produces ongoing SEO reports for Australia and New Zealand. Finished and getting ready to launch.
- Stack: Node.js, Express, TypeScript, EJS and PostgreSQL (moved over from MySQL), with Puppeteer for PDF reports, Resend for email and Stripe for subscriptions (free trial, monthly and annual plans).
- Connected the Claude API, Firecrawl, DataForSEO and Google's PageSpeed, Places and Search Console (OAuth) APIs.
- Wrote 100+ automated test files and made server-side fetching safe from SSRF and DNS-rebinding attacks.

Full Stack Software Engineer — Microkeeper (SaaS Payroll & Workforce Management) 2024 – 2026

- Took small modules from start to finish: working out requirements, designing, building, testing, releasing and checking them in production.
- Connected the Reckon and Xero accounting APIs to the core payroll platform.
- Sped up slow pages by adding database indexes, cutting load times from ~50s to ~3s in key modules for businesses with up to 10,000 employees.
- Used OOP, SOLID principles and common design patterns so new modules were easy to extend and maintain.
- Tracked down and fixed bugs in production, and reviewed code with the rest of the team.
- Built an analytics dashboard in JavaScript (Chart.js) that users could configure and that updated in real time, plus a profile image pipeline for thousands of users using the Cloudflare Images API.
- Built the Cost Centre Tracking module in PHP, and reworked the Self Managed Super Funds and Skills HR modules (layout, workflow and mobile support).

Web Developer (Contract) — Brandsmith / Knight Group Furniture 2023 – 2024

- Worked with one other developer on a C# / .NET web app for a furniture wholesaler, building product components, dynamic pricing and shipping features.
- Built the frontend for an admin file storage system and a registration flow with Google Maps API integration, styled with Tailwind CSS.

EDUCATION & CERTIFICATIONS

- **Bachelor of Information Technology** — Otago Polytechnic; included an AI paper covering embeddings
- **ISTQB Certified Tester Foundation Level (CTFL v4.0)** — in progress

TECHNICAL SKILLS

Languages: JavaScript, PHP, HTML, CSS, TypeScript, SQL, C#, Python
Frameworks: Node.js, Express.js, Tailwind CSS, Chart.js, EJS, Vite
Data & APIs: MySQL, PostgreSQL, SQL Server, stored procedures, REST APIs, Xero, Reckon, Stripe, Resend, DataForSEO, Firecrawl, Cloudflare Images, Google Maps
Engineering: OOP, SOLID, design patterns, unit testing, UAT and test planning, Playwright, code review, Git/GitHub, Docker, Agile, SDLC
AI & AI-Assisted Dev: Claude Code, Claude API, GitHub Copilot, prompt engineering
